

CURESEARCH
FOR CHILDREN'S CANCER

2025 Impact Report

Powered by community. Proven by progress.

WHO WE ARE

Our mission is to end childhood cancer by driving targeted and innovative research with measurable results in an accelerated time frame.

Together, we save kids faster.

CURESEARCH
FOR CHILDREN'S CANCER

INSIDE THIS REPORT

pg. 4	Leadership intro
pg. 6	Research Impact
pg. 14	Communities Fueling Progress
pg. 18	Corporate Partners
pg. 22	Donor Honor Roll
pg. 22	Financials

Our impact

At CureSearch, we only fund translational research projects with the strongest potential to become a new treatment and quickly reach patients. Simply put, if a project isn't on an accelerated path to new drug development, we don't fund it.

A note from our President Emeritus

Dear Friends and Supporters,

In 2025, CureSearch advanced a strong and focused scientific portfolio, funding innovative translational and clinic-ready research designed to accelerate more effective, less toxic treatments for children with cancer. This progress reflects our steadfast commitment to moving science forward with urgency and purpose, ensuring the most promising discoveries reach children faster.

Beyond the lab, our CureSearch Community Impact Awards expanded critical psychosocial support and programs at local hospitals, helping children and families navigate not only the disease itself, but also the emotional and practical challenges that accompany a diagnosis. These investments reflect our belief in treating the whole child.

Across the country, our volunteer Community Leadership Boards played a vital role in strengthening local engagement, building awareness, fostering media and community relationships, and driving grassroots fundraising. Their dedication continues to bring new voices, energy, and visibility to our mission.

Signature programs like Ultimate Hike, including the launch of a new Northern California experience, and events ranging from Jakefest to the Grant Thornton Invitational generated essential, mission-critical funding to sustain and grow our research efforts.

As we enter a leadership transition with my retirement in May 2026 and the appointment of CureSearch's next CEO in June, our strategy remains strong and our commitment unwavering. Each day, 42 children in the U.S. are diagnosed with cancer. Together, we remain focused on advancing the research that will deliver the life-saving options they urgently need, today and for years to come.

With gratitude,

A handwritten signature in black ink that reads "Kay Koehler".

Kay Koehler
President Emeritus
CureSearch for Children's Cancer

A note from our Board of Directors Chair

After nearly a decade of extraordinary leadership, Kay Koehler's retirement marks a meaningful moment for CureSearch. There is no greater truth than this: Kay's vision has become CureSearch's modern identity. What began nine years ago through her leadership has shaped who we are today, clarifying our strategy, sharpening our scientific focus, and ensuring that urgency, rigor, and compassion remain at the center of everything we do.

Because of Kay, CureSearch stands as a trusted catalyst in pediatric cancer research, driving better treatments from the lab to the clinic with measurable results and clear purpose. Equally important, her steady presence, wisdom, and heart for this mission have left an indelible mark on our Board, our team, and our broader community. She has guided CureSearch through complexity and change with integrity, optimism, and uncommon grace, and through her willingness to say no when it mattered most, protecting focus and ensuring we remained truly laser focused on where we could move the needle for children.

On a personal note, I am deeply grateful for Kay's partnership, her friendship, and the example she has set for all of us who are privileged to serve alongside her. I believe profoundly that our lives grow in value as we give them away in service to others, and Kay has given so much, so generously.

As Board Chair, I will continue working closely with CureSearch's incoming CEO to ensure a thoughtful transition and strong continuity, building on the foundation Kay leaves behind and advancing this mission with clarity, momentum, and care. Our progress has been made possible by an extraordinary community, including a Board of Directors and committee members now exceeding 35 dedicated leaders, alongside more than 40 Community Leadership Board volunteers whose commitment continues to propel our work forward. We are excited for what lies ahead and profoundly grateful for your time, energy, and support.

With gratitude,

A handwritten signature in blue ink that reads "Jared D. Brancazio". The signature is written in a cursive, flowing style.

Jared Brancazio
Chair, Board of Directors
CureSearch for Children's Cancer

A close-up photograph of a woman with long dark hair holding a young child with light brown hair and blue eyes. The child has a serious, almost somber expression. The woman is looking down at the child with a gentle, protective gaze. The background is softly blurred, showing a lamp and wooden paneling.

RESEARCH IMPACT

Turning Bold Ideas into Real Outcomes

CURESEARCH
FOR CHILDREN'S CANCER

More than Survival: A Path Back to Childhood

*Dr. David Munn
Medical College of Georgia at
Augusta University*

For children with brain tumors that have stopped responding to treatment, options are limited and outcomes have remained largely unchanged for decades. Dr. David Munn is working to change that.

With support from CureSearch, Dr. Munn and his colleague Dr. Ted Johnson are leading a Phase I clinical trial testing a new approach that combines standard chemotherapy with two immunotherapy drugs including indoximod, which was developed in Dr. Munn's own lab.

This work is already translating into meaningful outcomes for patients. For one child, the impact has been especially profound. After exhausting other treatment options, the child responded to Dr. Munn's therapy, regained strength, and was able to return to high school and graduate while still receiving treatment.

Stories like this show what progress can look like - not just extending life, but restoring moments that matter while moving us closer to better options for more children.

From Breakthrough Science to Clinical Trial

Dr. Gregory Friedman
MD Anderson Cancer Center

The CureSearch Acceleration Initiative Award is designed to move bold ideas from the lab to patients within three years - and Dr. Gregory Friedman's work is doing just that. His team is developing a novel immunotherapy for pediatric brain tumors that combines an engineered virus, designed to kill tumor cells, with a targeted vaccine to strengthen the body's immune response.

With support from CureSearch, Dr. Friedman's team generated the critical data needed to advance this approach toward clinical testing.

Their progress has already led to the launch of a new clinical trial for children with diffuse midline glioma (DMG), a devastating brain tumor with few treatment options.

Progress That Matters Most

This progress highlights the impact of investing in translational research, turning promising science into real treatment opportunities for children who deserve better options.

A New Option, Ready Now

Dr. Mohamed Abdelbaki
Washington University School
of Medicine in St. Louis

Dr. Mohamed Abdelbaki's CureSearch-funded clinical trial of an innovative natural killer (NK) cell therapy is now open at multiple hospitals across the U.S., with additional sites expected soon. This rapid expansion is bringing a cutting-edge therapy directly to children and young adults with recurrent brain tumors, where treatments remain limited. In this approach, NK cells - immune cells that can naturally find and destroy cancer - are collected from healthy donors and enhanced to better attack tumor cells and resist signals that would normally weaken them.

Because this therapy is "off-the-shelf," it can be prepared in advance and given when needed, rather than custom-made for each patient. The study has been expanded to include additional aggressive brain tumors, such as atypical teratoid rhabdoid tumor (ATRT) which primarily affects children under the age of 3, giving even the youngest patients the opportunity to receive this innovative therapy.

This makes treatment faster, more scalable, and more accessible.

“Our Foundation has long relied on CureSearch's Scientific and Industry Advisory Councils to identify the most promising pediatric cancer research, and their guidance has never disappointed.

Supporting Dr. Abdelbaki's innovative use of natural killer cells represents the pinnacle of our efforts, brings renewed hope to families, and marks a milestone in our decades-long search for a cure.”

- Paula Carter, CureSearch Board Emeritus & Founder of the Scott Carter Foundation

From Early Investment to Real-World Impact

Dr. Ranjit Bindra
Yale School of Medicine

Uncovering a Critical Vulnerability

Early in his career, Dr. Ranjit Bindra received a CureSearch Young Investigator Award to study how certain brain tumors in children and young adults acquire defects in DNA repair pathways. This work uncovered a key vulnerability - one that could be targeted to make cancer cells more responsive to treatment and open new possibilities for therapy.

From Discovery to Clinical Trial and Beyond

With continued support through a CureSearch Catapult Award, Dr. Bindra advanced this discovery into action, launching a multi-institutional clinical trial for adolescents and young adults with IDH1/2-mutant gliomas.

Building on his discoveries, Dr. Bindra co-founded Modifi Biosciences, a biotech aimed at developing therapies based on DNA repair weaknesses in cancer. The company was later acquired by Merck, carrying this progress closer to patients.

“Receiving the CureSearch Young Investigator Award early in my career gave our lab the confidence and momentum to pursue bold pediatric cancer research at a critical stage. That early support helped keep us focused on translating discovery science into new therapeutic strategies for children with cancer.”

-Dr. Ranjit Bindra

Turning Early Promise into Breakthroughs

Breakthroughs begin with bold ideas and early belief. Dr. Ranjit Bindra's journey demonstrates what can happen when promising research is supported at the right moment.

"There is immense promise for the development of new therapies...but with this promise come challenges in pediatric clinical trial design and execution that can only be addressed when industry sponsors and academics work collaboratively."

”

- Brenda Weigel, MD
PEDS Co-Chair and Chair of the CureSearch
Scientific Advisory Council

2026 Pediatric Early Development Symposium

Sponsored by: **sanofi**

Uniting Experts to move research forward

The 2025 CureSearch Pediatric Early Development Symposium (PEDS) united leaders across research, industry, regulatory agencies, and advocacy with a shared goal: to get better treatments to children faster.

In her keynote, former FDA Principal Deputy Commissioner Dr. Janet Woodcock highlighted barriers in pediatric drug development and opportunities to rethink how therapies reach children.

Across sessions, speakers emphasized patient voice, funding gaps, and collaboration as keys to delivering better, faster treatments.

PEDS is expanding into a quarterly webinar series in 2026. Learn more and join us at curesearch.org/peds.

Inside the Lab: Bringing Supporters Closer to the Research

In 2025, CureSearch supporters stepped inside the labs of two CureSearch-funded researchers: Dr. Yael Mossé at Children's Hospital of Philadelphia and Dr. John Prensner at the University of Michigan. These visits offered a firsthand look at the innovative research our community is helping advance while creating meaningful connections with the scientists working to develop better treatments for children with cancer.

Dr. Yael Mossé's lab at Children's Hospital of Philadelphia

Dr. John Prensner's lab at University of Michigan

COMMUNITIES FUELING PROGRESS

Local Impact, National Momentum

Lifesaving Progress Inspired by Violet

When Violet was diagnosed with an aggressive brain tumor called ATRT at just four months old, her family was suddenly thrown into a world of uncertainty, emergency surgeries, chemotherapy, radiation, and long hospital stays. Over the years, Violet endured countless treatments and lasting side effects, yet through it all, her strength, joy, and resilience inspired an entire community to rally around her with hope and action.

What began as support for one special little girl quickly grew into something much larger. In partnership with CureSearch, Violet's Village has raised more than \$90,000 to advance critical childhood cancer research, including research focused on pediatric brain tumors like ATRT.

Driven by the belief that children deserve not only to survive cancer but live full, healthy lives after treatment, Violet's Village continues to turn hope into action. Every fundraiser, event, and donation helps fuel progress toward safer, more effective therapies for children facing cancer today and for families who will face these diagnoses in the future.

Together, Violet's Village is helping create a brighter future for kids with cancer — one filled with hope, better treatments, and moments simply being kids again.

“ Our hope is that in the future kids not only have a great chance of surviving, but **LIVING** without the terrible side effects today's childhood cancer treatments cause. ”

- Victoria Kenney, Violet's mom

Communities in Action

Families and supporters from across Utah gathered at Sugar House Park for the 2025 Salt Lake City Walk.

Colorado families, supporters, and business partners came together for the 2025 Colorado Hopetober Fest.

Atlanta Leadership Board members joined the community at LeahPalooza, a local event celebrating resilience and hope.

North Carolina's Triangle Leadership Board members gathered at Barbecue & Bubbly.

Charlotte Leadership Board members hosted their inaugural pickleball tournament.

We're on the Trail to a Cure

Team Mattel's Samantha B. at our inaugural CA Coastal Redwoods Ultimate Hike with Brave Barbie.

In 2025, more than 280 hikers and volunteers came together at Ultimate Hikes across the country, raising over \$840,000 for childhood cancer research.

Along the way, they built connections, honored loved ones, and demonstrated the power of a community united behind children with cancer. Every step helped advance the research pipeline, bringing promising new treatments closer to the children who need them most.

Ultimate Hike is a supported, joyful, community-driven weekend for everyone. What makes Ultimate Hike powerful isn't the miles - it's the mission.

Mark, national board member and hiker, and Gino, hike volunteer, at the beautiful Bridger-Teton National Forest in Jackson Hole.

Caden, neuroblastoma survivor, and his family raised over \$34,000 ahead of their 4th Ultimate Hike in 2025.

CA Coastal Redwoods hikers celebrate at the starting line ahead of a powerful day on the trail.

A Community United for Progress: The 2025 Volunteer Summit

CureSearch volunteer leaders from across the country gathered for the 2025 CureSearch Volunteer Summit - an opportunity to connect, learn, and strengthen the community driving the mission forward. The summit brought together Community Leadership Board members, Ultimate Hike leaders, national and local volunteers, and staff for a shared purpose: to deepen their understanding of CureSearch's work and explore how volunteers can continue to expand the organization's impact in their communities.

A very moving parent panel featured families who have been impacted by childhood cancer. Their stories offered an honest look at the realities faced during treatment and beyond. These conversations reinforced the vital role volunteers play in advancing our mission. By bringing together families, researchers, volunteers, and staff, we were reminded that progress against childhood cancer is driven by a community working together.

The researcher panel offered volunteers a closer look at the complex work behind developing new treatments for children with cancer, as researchers shared insights into the challenges of pediatric drug development.

CureSearch-funded researchers emphasized the critical role of nonprofits in moving promising research forward.

CORPORATE PARTNERS

Partners in the Community. Partners in the Mission.

Partnership Spotlight

Representation,[®] Awareness, and Action

For more than a decade, Mattel has partnered with CureSearch to distribute a special collection of Brave Barbie dolls made exclusively for children impacted by cancer.

The bald dolls provide comfort to children experiencing hair loss during treatment, and serve as a symbol of courage and strength.

“ Seeing the light these dolls bring during life’s hardest moments is profoundly humbling and a privilege we hold close to our hearts.”

- Nancy Molenda,
Mattel's Vice President of Global Corporate Events
and Philanthropy

In 2025, the partnership reached a new milestone with the launch of the first-ever Brave Ken doll. Our team was honored to provide critical insights into the development of the new line, ensuring authentic representation of the childhood cancer community.

Mattel employees have also embraced opportunities to engage directly with the CureSearch mission through the Ultimate Hike program, raising more than \$50,000 to support childhood cancer research.

Funding the next breakthrough together

Since 2020, the Pimiento Tea Room in Holly Springs, NC, has hosted monthly Supper Clubs benefitting CureSearch. For owners Matt and Christy Griffith, the cause is personal - their daughter, Eve, is a childhood cancer survivor.

"Finding a creative way to raise money with limited time was our goal" said Christy. "It's a great way for people to enjoy a fun night out while funding life-saving research so that more children can have their happily-ever-afters."

Creating New Opportunities to Give Back

Busy Bee travel centers throughout Florida have proudly supported CureSearch since 2019. The Busy Bee team has poured creativity and heart

into our mission – one cup of coffee, one candy bar, and one customer at a time. This year, their innovation and commitment reached new heights. From a months-long register round-up campaign to vendor promotions and a Coca-Cola sponsored BBQ – their efforts touched every corner of their business.

2025 Busy Bee Charity Cookout benefiting CureSearch

“It is truly our honor to be a supporter of CureSearch and we look forward to many more years of partnership!”

- Elizabeth Waring
President & CEO, Busy Bee
